SOLARIS FLAM, fire-resistant paper that is "safe" from every angle.

MOSAICO, the Burgo Group business unit that produces specialty papers, has enhanced the qualities of **SOLARIS FLAM**, the fire-resistant grade from its Poster Paper range. It was created for indoor posters and to be laminated to board for POS display units and is used where the printing support must be of top quality and must respect strict safety standards.

In particular, there is a growing demand for suspended advertising panels for shopping malls and supermarkets. This segment requires ever-shorter production times but also excellent opaqueness, because the posters are printed on both sides and suspended, which makes it essential to avoid the "shine through" effect.

SOLARIS FLAM now guarantees record ink-drying times, and outstanding opaqueness.

SOLARIS FLAM is a fire-resistant, woodfree paper (M1 fire-reaction rating), with a good degree of opaqueness and whiteness, and excellent printing performance for both offset printing and high speed solvent-based digital printing. It is available in both a two-side coated version (substance 190 and 250 gsm) and a one-side coated version (120 gsm). It adheres to the strict requirements for use in public places that have very high and rigorous safety standards: shopping malls, undergrounds, railway stations, tunnels, cinemas, theatres, museums, etc..

All these targets are met perfectly with **SOLARIS FLAM**, the paper that is "safe" from every angle.

Further information about Solaris Flam and the Mosaico paper range is available from the site www.mosaicopapers.com.
