Tecno^{plus}: reliable paper that is a leap forwards

Burgo Group, one of the world's leading manufacturers of coated papers, presents Tecno^{plus}, its fine coated paper that is even more reliable and even more surprising. Tecno^{plus} guarantees a "leap forwards" for any project that needs fast, top quality end results: commercial publications, up-market periodicals, inserts, brochures, books and calendars, for offset and web offset printing.

The bulk and stiffness of Tecno^{plus} have been optimised to guarantee **record runnability**, an increasingly important element when choosing a reliable paper. Thanks to the excellent opacity and the **cool tone** in particular, the colours are brighter with vivid contrasts, and the pictures are reproduced precisely in every detail. The addition of a 250 gsm substance extends the range from 80 to 250 gsm for both finishes, gloss and satin, to meet all printing requirements.

Service also improves with Tecno^{plus}: thanks to the new finished product warehouse, the main standard formats are available for rapid delivery; in just 7 days, 6 different reel heights for each finish are available from the new cutting reels warehouse.

Tecno^{plus} is also available with PEFC and FSC (Ecotecno^{plus}) certification, designed for outstanding runnability while it guarantees respect of the environment. And the energy used in the Sarego and Toscolano plants to produce Tecno^{plus} and Ecotecno^{plus} comes from a high efficiency co-generation plant, with a combined turbogas cycle.

The sales network is at your disposal for swatch book requests, while all the information and the Tecno^{plus} spec sheets are available from the site <http://www.burgopapers.com>
